PORTFOLIO PERFORMANCE REPORT

Vikram

August 1 - November 5, 2026

EXECUTIVE SUMMARY

From the prior report's 31 July market close through the supplied 5 November account capture, equity moved from $116,401 to $105,591.53, a change of -$10,809.47 (-9.3%). The period started with two profitable exits in August and September. A heavier run of October and early-November losses then reduced the realized result for the period to -$945.89. The seven open positions were almost flat in aggregate at the time of the capture.

KEY RESULTS

- Closing account equity: $105,591.53 on 5 November.
- Period change: -$10,809.47 (-9.3%) from the prior report's final 31 July mark.
- Completed executions recorded during the period: 12.
- Realized P&L from eight closing actions: -$945.89.
- Current marked position value: $41,546.67, across 7 open holdings.
- Current unrealized P&L: +$84.20, based on the supplied position capture.

PORTFOLIO SCOPE

The account remained long-only in the supplied record. The report follows completed executions and the current-position capture. It records what was bought, sold, and still held without assigning a motive that does not appear in the exports.

The three largest marked positions at the end of the period were MSFT, AFRM, and MDGL. Together they represented 69.3% of current marked exposure.

MONTHLY TRADE ACTIVITY

August

August closed with a positive realized result of +$656.55. The two completed executions were full exits, so the month reduced the number of open positions rather than adding new exposure.

- 24 August: exited 111.79 BE shares at $188.51, realizing +$1,066.08.
- 26 August: exited 13.03 AVGO shares at $352.17, realizing -$409.53.

The BE gain more than offset the AVGO loss. Both positions had been opened before the reporting period, so the month reflects exits from the existing book.

September

September contained one documented completed execution. The AAPL exit produced the largest realized gain of the reporting period.

- 18 September: exited 91.54 AAPL shares at $337.69, realizing +$1,552.64.

August and September together generated +$2,209.19 of realized gains. Those gains were later outweighed by closing actions in October and early November.

EXECUTION RECORD

This report counts only completed executions. The trade-history export supplies the August and September exits, while the activity export provides the more detailed October and November execution sequence.

MONTHLY TRADE ACTIVITY

October

October was the busiest month, with eight documented completed executions. Three additions on 9 October increased the AMZN, PLTR, and NVDA positions. The rest of the month contained exits, a partial BLDP sale, and a short-lived SPCX position. Realized P&L for the month was -$1,982.43.

- 9 October: added 19.12 AMZN at $261.49, 48.64 PLTR at $205.56, and 21.78 NVDA at $229.47.
- 22 October: sold 2,405.65 BLDP shares at $1.50 in a partial close, realizing -$288.11.
- 22 October: opened 32.19 SPCX shares at $155.29 and exited 63.62 NVDA shares at $212.75, realizing -$904.32 on NVDA.
- 29-30 October: exited 32.08 AMZN at $242.43 for -$219.92 and closed SPCX at $137.58 for -$570.08.

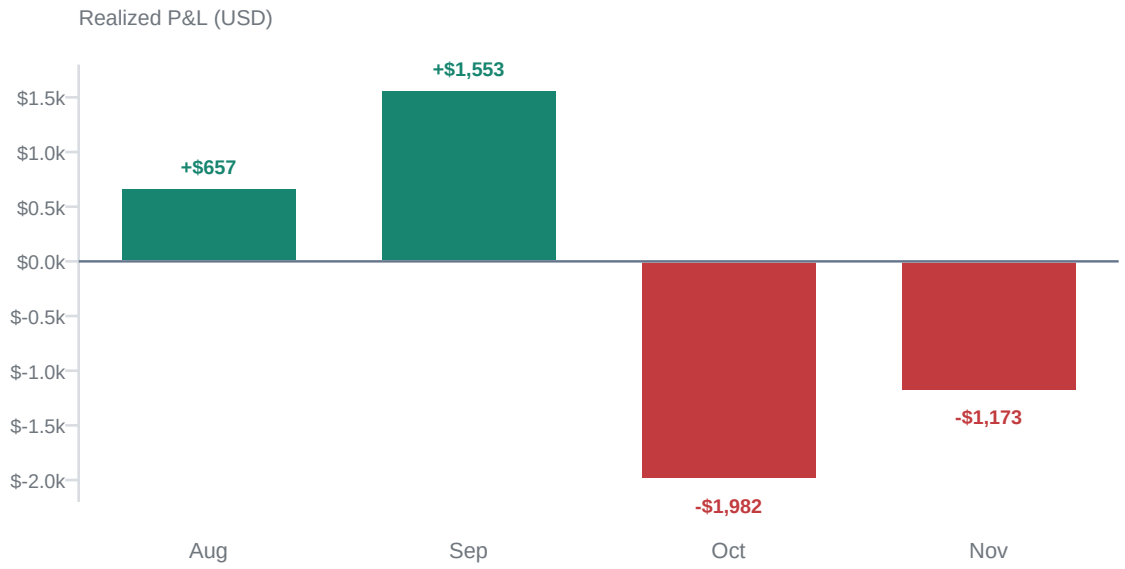
November Through 5 November

The available period record contains one completed execution in November. The PLTR position, increased in October, was fully closed on 3 November.

- 3 November: exited 71.92 PLTR shares at $168.16, realizing -$1,172.65.

October and early November produced -$3,155.08 in realized losses. That reversed the earlier gains and left the four-month realized result at -$945.89.

REALIZED PROFIT AND LOSS BY MONTH



The source exports do not provide a daily account-equity series. This chart therefore shows realized results by closing month, rather than a reconstructed equity curve.

PERIOD RESULT

The profitable August and September exits totaled +$2,209.19. The October and November closing actions totaled -$3,155.08. The difference is the period's realized result of -$945.89.

The account-equity change is larger than the realized result because the supplied 5 November equity figure also includes the value of positions that remained open. The stated open unrealized P&L was +$84.20.

WHAT THE CHART SHOWS

- September was the strongest realized month because of the AAPL exit.
- October had the largest realized loss, led by the NVDA exit and the closed SPCX position.
- The November PLTR exit made the four-month realized result negative despite the first two positive months.

CURRENT POSITION ALLOCATION

	Marked value	Weight
MSFT	$10.7k	25.8%
AFRM	$9.3k	22.4%
MDGL	$8.8k	21.1%
PLUG	$5.2k	12.5%
BRK.B	$4.6k	11.0%
NET	$1.9k	4.6%
BLDP	$1.0k	2.5%

Weights use the $41,546.67 marked value of the seven displayed holdings. They describe current position exposure and are not a restatement of total account equity.

CURRENT POSITION REVIEW

- MSFT, AFRM, and MDGL account for $28,801.62 or 69.3% of marked position value.
- The largest open gains were MSFT +$2,732.14 (+34.17%), AFRM +$1,293.89 (+16.18%), and BRK.B +$574.20 (+14.36%).
- The largest open declines were PLUG -$2,037.61 (-28.11%), MDGL -$1,212.78 (-12.13%), and BLDP -$984.62 (-48.54%).
- The aggregate open P&L was close to flat because the gains in MSFT, AFRM, and BRK.B offset the declines in the other holdings.

LESSONS FROM THE PERIOD

- The result changed direction in October. The first two months of realized gains did not cover the October and November exits.
- A near-flat aggregate unrealized P&L hides meaningful differences across the open positions. MSFT and AFRM gains offset large losses in PLUG, MDGL, and BLDP.
- The current book is concentrated. The three largest positions make up roughly seven-tenths of marked exposure.
- The exports establish execution prices, quantities, and trade P&L, but they do not contain an entry thesis or a daily equity trail.

PRIORITIES FOR THE NEXT REPORT

- Export a daily account history with equity, balance, position value, and open P&L so the performance path can be traced without reconstruction.
- Keep a short note for each new position with the entry reason, intended size, and review condition.
- Review concentration alongside individual position movement, especially when a few holdings dominate marked exposure.

CONCLUSION

The August-November record shows a positive start followed by heavier losses in October and early November. Account equity finished $10,809.47 below the prior report's final mark. The open book was roughly flat as of 5 November, but its results were uneven across seven positions. The next review will be more useful with a daily equity export and contemporaneous trade notes.

Data basis: supplied paper-trading Trade History and Activity Log exports dated 5 November 2026; supplied 5 November position capture; and the prior May-August report for the 31 July opening-equity mark. Dollar amounts are USD. Analysis is limited to completed executions and the current positions shown in the supplied capture.
